

ANALYSIS OF FINANCIAL TIME SERIES

1 - Financial Time Series and Their Characteristics

1.1 Asset Returns

1.2 Distributional Properties of Returns

1.3 Processes Considered

2 - Linear Time Series Analysis and Its Applications

2.1 Stationary

2.2 Correlation and Autocorrelation Function

2.3 White Noise and Linear Time Series

2.4 Simple Autoregressive Models

2.5 Simple Moving-Average Models

2.6 Simple ARMA Models

2.7 Unit-Root Non stationary

2.8 Seasonal Models

2.9 Regression Models with Time Series Errors

2.10 Long-Memory Models

3 - Conditional Heteroscedastic Models

3.1 Characteristics of Volatility

3.2 Structure of a Model

3.3 The ARCH Model

3.4 The GARCH Model

3.5 The Integrated GARCH Model

3.6 The GARCH-M Model

3.7 The Exponential GARCH Model

3.8 The CHARMA Model

3.9 Random Coefficient Autoregressive Models

3.10 The Stochastic Volatility Model

3.11 The Long-Memory Stochastic Volatility Model

3.12 An Alternative Approach

3.13 Application

3.14 Kurtosis of GARCH Models

4 - Nonlinear Models and Their Applications

4.1 Nonlinear Models

4.2 Nonlinearity Tests

4.3 Modeling

4.4 Forecasting

4.5 Application

5 - High-Frequency Data Analysis and Market Microstructure

5.1 Nonsynchronous Trading

5.2 Bid-Ask Spread

5.3 Empirical Characteristics of Transactions Data

5.4 Models for Price Changes

5.5 Duration Models

5.6 Nonlinear Duration Models

5.7 Bivariate Models for Price Change and Duration

6 - Continuous-Time Models and Their Applications

6.1 Options

6.2 Some Continuous-Time Stochastic Processes

6.3 Ito's Lemma

6.4 Distributions of Stock Prices and Log Returns

6.5 Derivation of Black–Scholes Differential Equation

6.6 Black–Scholes Pricing Formulas

6.7 An Extension of Ito's Lemma

6.8 Stochastic Integral

6.9 Jump Diffusion Models

6.10 Estimation of Continuous-Time Models

7 - Extreme Values, Quantile Estimation, and Value at Risk

7.1 Value at Risk

7.2 RiskMetrics

7.3 An Econometric Approach to VaR Calculation

7.4 Quantile Estimation

7.5 Extreme Value Theory

7.6 An Extreme Value Approach to VaR

7.7 A New Approach Based on the Extreme Value Theory

10.2 Gibbs Sampling

10.3 Bayesian Inference

10.4 Alternative Algorithms

10.5 Linear Regression with Time-Series Errors

10.6 Missing Values and Outliers

10.7 Stochastic Volatility Models

10.8 Markov Switching Models

10.9 Forecasting

10.10 Other Applications

8 - Multivariate Time Series Analysis and Its Applications

8.1 Weak Stationary and Cross-Correlation Matrixes

8.2 Vector Autoregressive Models

8.3 Vector Moving-Average Models

8.4 Vector ARMA Models

8.5 Unit-Root Nonstationarity and Co-Integration

8.6 Threshold Co-Integration and Arbitrage

8.7 Principal Component Analysis

8.8 Factor Analysis

9 - Multivariate Volatility Models and Their Applications

9.1 Reparameterization

9.2 GARCH Models for Bivariate Returns

9.3 Higher Dimensional Volatility Models

9.4 Factor-Volatility Models

9.5 Application

9.6 Multivariate t Distribution

10 - Markov Chain Monte Carlo Methods with Applications

10.1 Markov Chain Simulation
